

Important information about CBD Immune Plus™

CAPSULES FOR DOGS

Hemp Oil Health and Immune Support

CBD benefits enhanced with new immune probiotic technology

Hemp oil is proving to be of value in dogs suffering with arthritis, seizures, anxiety, pain, skin problems, and many other canine medical issues. CBD Immune Plus™ is a nutritional supplement, in capsule form, developed specifically to assist dog owners and veterinarians.

CBD Immune Plus™ includes a combination of three key ingredients:

- Active CBD (cannabinoid) from hemp oil
- Del-Immune V® for immediate immune system support
- Bovine colostrum powder

Scientific and medical research has indicated that each of the ingredients in CBD Immune Plus™ can provide important canine benefits:

- CBD (cannabinoid) has medicinal value but is not mind-altering and has been shown to provide anti-inflammatory properties.
- Del-Immune V® is an immune modulator resulting from more than a half century of research and development. Del-Immune V® has been used by veterinarians for more than 10 years to assist the canine immune system in warding off bodily invaders such as viruses, bacteria and fungus.
- Bovine colostrum, which comes from the breast milk of cows, has been shown to assist in the regulation of the immune system in animals. Bovine colostrum has also been shown to support repair of the immune system and connective tissues when needed.

These three components have been combined to create a blend to enhance the benefits of each ingredient for dogs. Clinical trials, along with testing by veterinarians, have demonstrated that CBD Immune Plus™ can successfully treat many varied canine health issues and conditions.

Among these are:

- Arthritis and joint problems
- Seizures
- Gastro-intestinal problems
- Pain
- Food allergies and food tolerance issues
- Nausea/vomiting
- Sleep disorders
- Anxiety and other neurological disorders

A Personal Story: The Creation of CBD Immune Plus™ for Dogs

The creators of CBD Immune Plus™ are the husband and wife team of Dr. John A. Sichel, RPh, PD, Compounding Pharmacist, and Dr. Luba S. Sichel, PhD, Founder and Dean Emeritus, Institute of Biotechnology, Kiev, Ukraine.

Development of the product was motivated by the couple's 10-year old Maltese shih tzu, Alex, who suddenly was unable to walk one morning. A veterinarian diagnosed the problem as a pinched cervical nerve that impeded walking. Both allopathic and holistic medications were tried without much success.

The vet then suggested trying a dose of CBD tincture in addition to an immune formulation for pets developed by John and Luba. Within three days, Alex was walking and within a week he was playing with his stuffed toys again.

Healthier Dogs. Happier Owners.

Information for Dog Owners

Dogs, like people, are susceptible to a wide range of illnesses and medical conditions. CBD Immune Plus™ nutritional supplements for dogs have

been created to assist dog owners in maintaining the well-being of their beloved canine friends.

Immune system cells of every mammal, including dogs, include CBD receptors. The specific receptor is CB-2 that produces the anti-inflammatory response.

When needed, CBD Immune Plus™ supplements for dogs can be an essential part of every dog's health regimen...no matter their breed, size or age...offering several important opportunities for prevention and therapy of common canine health issues.

CBD Immune Plus™ supplements are easy to give to your dog. A pull-apart capsule enables dosages to be given directly as capsules or sprinkled on the dog's food (studies show that dogs like the taste and smell).

Here's what people are saying about CBD Immune Plus™

"My 8 year-old cockapoo has suffered with allergies since I adopted her at 10 months old. Being familiar with the benefits of hemp-based products for humans, I was open to introducing CBD Immune Plus™ to see if it could help, but I was skeptical that anything could make a difference given how much I'd already tried with no success. By the end of her first week of receiving just one capsule daily, I noticed she had significantly less discharge than usual around her eyes. It's been three weeks now, and not only have her eyes remained clearer, she's also scratching herself less and less. Thank you for finally bringing my sweet girl some relief...I will definitely be reordering!"

- Jill, New York

"Highly recommend this product. I have an 11 year-old German shepherd, who is in generally good health, but has some arthritis. Since I've put her on CBD Immune Plus™ I have noticed that she is moving better, wants to play more and is even asking to go for walks, which she hasn't done in a while! I have also noticed that her coat has a nice shine to it now. I'm very pleased with the results I've seen so far and plan to continue using this supplement."

- Kathy, New York

"Our dog is a 13 year-old border collie and shepherd mix. For the past 4 years he has not gotten up with me each morning at 4 AM as I prepare for work. He is happy to sleep until noon. His hips and lumbar show arthritis so he is also not eager to take long walks anymore. About three weeks ago I started the CBD Immune Plus™. Two capsules a day. Usually sprinkled on his food. Was surprised when he started to arise at 4 AM with me. We are now doing about a mile walk after 4 AM each morning. He has much more energy and not showing his arthritis. As a side note... he really likes the taste of the powder in the capsules."

- Mo, Colorado

Pet owners report better, faster response than with CBD Tincture

The Science Behind The Innovation

Information for Veterinarians

There has been an explosive use of CBD (Hemp Oil) in pets suffering from arthritis, anxiety, seizures, pain and a variety of other issues. ⁽¹⁾ CBD is obtained from the hemp plant which is in the cannabis/marijuana family and classified as cannabinoids. The oil from the hemp plant and hemp seeds, cannabidiol, is classified as a nutritional supplement. CBD oil is anti-inflammatory and does not have the recreational properties found in THC. The CBD Oil derived from industrial hemp is legal. ⁽²⁾

CBD Tincture is the most frequently used product for dogs. A tincture is an alcoholic solution dispensed in a dropper type bottle. The usual recommended dosage for dogs is 1 to 2 drops under the tongue, given several times a day. With growing acceptance, CBD products for dogs are expanding into treats, gummies and other canine-friendly formulations. Most tinctures provide 1 milligram of active CBD per drop. It is important to note the amount of active CBD in any product. ⁽³⁾

A synergistic combination of ingredients

CBD Immune Plus™ for dogs is formulated with CBD (cannabinoid) from hemp oil, Del-Immune V® for immediate immune system support, and fresh colostrum powder from California. As a botanical/natural product, a CBD formulation has a great margin of safety. Concerns regarding respiratory depression and impact on other vital functions with CBD hemp oil products are reportedly devoid of these toxicity problems. ⁽⁵⁾

- Abundant evidence indicates that cannabinoids modulate innate immune (immediate immune system) responses. Both humans and dogs have CBD receptors that are activated in the presence of CBD products. The innate immune response is the primary protection against any foreign invaders that create acute inflammation regardless of the source, i.e., virus, infection, wounds, and most diseases. All types of immunity are sensitive to cannabinoid modulation.
- Del-Immune V® (www.delimmune.com) is a natural immune-modulator (turns on when needed and turns off if not needed) that is derived from the same group of bacteria that produces yogurt. It is comprised of cell pieces which contain immune triggers to quickly launch an innate immune response. Balancing the immune system with Del-Immune V® and combining Del-Immune V® with CBD Hemp Oil powder provides a one-two punch that increases the overall therapeutic response.
- Colostrum is the first milk from the breast. Mammals (dogs included) do not have an active immune system at birth and need colostrum for immune protection until their own immune system is developed. ⁽⁷⁾ The colostrum in CBD Immune Plus™ is obtained from free-range feed cows raised in northern California. Clinical research clearly demonstrates the addition of colostrum to Del-Immune V® and blending with CBD hemp oil powder produces a superior response compared to CBD Tinctures and other basic CBD products.

How can CBD and immune regulation be vital to canine well-being?

New research confirms that cannabinoids may have an important balancing role that allows the immune system in dogs to function at maximum efficiency.

The canine immune system is made up of two different immune branches. The innate immune system immediately protects dogs from internal and external threats such as bacteria, viruses and fungus...working quickly day-in and day-out. The adaptive (secondary) immune system requires a longer time to provide specific protection. It is the adaptive immune system that works with vaccines to produce long term immune protection such as with Parvo vaccine. ⁽⁶⁾

Inflammation is a normal immune system function. However, acute inflammation is an immune response to many factors, including infection, disease, arthritis, wounds, and many other types of issues that cause sickness in both humans and animals. Acute inflammation is extremely important because it contributes to the healing process. The integration of CBD's healthful advantages with immune regulation can increase clinical benefits and therapeutic response, especially in more serious chronic inflammation situations.

The main effect of CBD on the immune system is well defined as an anti-inflammatory. It is this anti-inflammatory activity that accounts for the significant therapeutic relief in dogs afflicted with arthritis, seizures, anxiety, pain, etc. ⁽⁴⁾

Product Facts

Each CBD Immune Plus™ capsule contains the following: **a full 2 mg active American-made CBD** (from U.S. produced CBD powder); 12 mg Del-Immune V® powder; and 300 mg colostrum (for immune regulation and healing). The ingredients are blended and encapsulated in a "pull apart" capsule. CBD Immune Plus™ may be administered directly as a capsule or opened and sprinkled on the dog's food.

Safety

CBD Immune Plus™ capsules for dogs contain natural and U.S. sourced products. There are essentially no adverse side effects. All production steps and quality control processes are performed in state- and federally-inspected facilities located in the USA.

Suggested Dosage

The active CBD in CBD Immune Plus™ powder is fully analyzed to assure accurate dosing. In addition, a 2 mg CBD dosage provides a efficacious quantity of product to obtain a desired therapeutic response.

- Pull apart capsules may be given as a capsule or opened and spread on food
- Up to 15 pounds: One capsule once or twice per day
- 15-30 pounds: Two capsules once or twice per day
- Larger dogs: Up to three capsules once or twice per day if needed

Also available...

Del-Immune V[®] Immune Products for Dogs, Cats and Horses

Pet Natural Anal Gland Relief[™]

For “Scooting”

Formulated to support healthy digestion and optimal bowel movements, Pet Natural Anal Gland Relief[™] provides relief of “scooting,” anal itching and rectal discomfort in all breeds of dogs and cats.

Ingredients:

Del-Immune V[®] for immediate immune support and to reduce inflammation; probiotics to restore and balance intestinal flora; 100% pure organic oat flour to calm bowel issues and normalize poops.

Max-Immune Forte[™]

For “Senior” Pets; Pets on Antibiotics

The versatile Max-Immune Forte[™] formulation provides five-way immune support for improved intestinal balance in all breeds of dogs and cats.

Ingredients:

Del-Immune V[®] for immediate immune support and to reduce inflammation; five strains of probiotics that occur naturally in the intestinal tracts of healthy animals; first-milking colostrum powder for support of the secondary, or “adaptive” immune system; beta glucan powder to increase immune defense and natural “killer” T cell function; whey protein powder to support and boost muscle function.

Pet Stress Relief[™]

For Fussy Eaters; Pets Home Alone; Kennel Stays

Stress in dogs and cats can be related to adoption, rescue, owner absence, nutrition issues, changes in routines and several other factors. Pet Stress Relief[™] can “tune-up” a pet’s immune function and provide ongoing support against illness and disease.

Ingredients:

Del-Immune V[®] for immediate immune support and to reduce inflammation; first-milking colostrum powder for support of the secondary, or “adaptive” immune system; whey protein powder to support and boost muscle function.

Equine R&R[™]

For Horse Repair and Recovery

Formulated specifically for equine health, Equine R&R[™] assists horses in recovering naturally from such stresses as heavy workouts, transport and competition while also enhancing energy in older animals.

Ingredients:

Del-Immune V[®] for immediate immune support and to reduce inflammation; first-milking colostrum powder for support of the secondary, or “adaptive” immune system; beta glucan powder to increase immune defense and natural “killer” T cell function; five strains of probiotics that occur naturally in the intestinal tracts of healthy animals; 100% whole oat flour high in beta glucan and fiber content.
